## EDUCATIONS

### COEP Technological University | Pune

Master of Technology in Data Science

Aug 2024 – July 2026

CGPA : 8.16 / 10

### Fr. Conceicao Rodrigues Institute of Technology | Navi Mumbai

Bachelor Of Technology in Computer Engineering

Aug 2019 – May 2023

CGPA : 8.84 / 10

## WORK EXPERIENCE

### Generative AI Intern | Internship

Sep 2025 – Oct 2025

Vodafone Idea Foundation | Edunet Foundation

Remote

- Developed LLM-powered conversational data analysis solutions using Prompt Engineering and NLP to process natural language queries.
- Built AI workflows by integrating LLM APIs and optimizing prompts to generate accurate, context-aware responses.
- Implemented Retrieval-Augmented Generation (RAG) concepts using embeddings, document chunking, semantic search, and vector databases for knowledge retrieval.
- Worked with Python, LangChain, and API integration to develop and evaluate Generative AI applications.
- Improved response quality through prompt optimization, response evaluation, and iterative testing for real-world conversational AI use cases.

**Technologies / Skills Used:** Python, LLMs, Prompt Engineering, LangChain, RAG, LLM APIs

### Data Analyst Intern | Internship

Sep 2025 – Dec 2025

Infyntrek Systèmes

Remote (Bengaluru)

- Developed SQL-based ETL pipelines and automated data preprocessing workflows for large-scale financial transaction datasets using SQL, Python, Pandas, and NumPy.
- Built and evaluated Machine Learning models using Logistic Regression and Random Forest for credit risk prediction, leveraging feature engineering and model validation techniques.
- Implemented RFM Analysis, K-Means Clustering, and Customer Lifetime Value (CLV) modeling to perform customer segmentation and support data-driven business strategies.
- Conducted Exploratory Data Analysis (EDA) and created interactive Power BI/Tableau dashboards to visualize financial KPIs, customer behavior, and operational insights.
- Evaluated model performance using Precision, Recall, F1-Score, and ROC-AUC on imbalanced datasets, improving the reliability of predictive analytics.

**Technologies / Skills Used:** Python, SQL, Pandas, Scikit-learn, Machine Learning

## PUBLICATIONS & RESEARCH

### Explainable Graph-Based Learning Framework for Drug-Drug Interaction Prediction

[IEEE Xplore ↗](#)

Published in IEEE Xplore | ICICI 2026

Researched and developed an AI approach using Graph Attention Networks that predicts when two medicines are unsafe to take together. The study also investigates which enzymes in the body cause the interaction, achieving **98.24% accuracy** on 191K+ drug pairs.

## PROJECTS

### Explainable Drug-Drug Interaction Prediction (Research Project)

[Kaggle Code ↗](#)

Jun 2025 – May 2026

Researcher

- Researched an AI system that predicts whether two drugs are dangerous to take together, using molecular structure and biological behaviour of each drug as inputs.
- Investigated an explanation layer that tells doctors why two drugs interact, highlighting specific enzymes responsible for the risk.
- Proposed a stricter evaluation protocol where both test drugs are unseen during training, achieving **98.24% accuracy** on DrugBank dataset of 191K+ drug pairs.

**Technologies / Tools Used:** Python, PyTorch Geometric, RDKit, ChemBERTa, SHAP, GNN

### AI Video Assistant

[GitHub ↗](#)

- Made a tool that takes any YouTube link or video/audio file and automatically converts speech into text (transcription) — works for English (Mistral AI) and Hindi/Hinglish (Sarvam AI).
- The tool reads the meeting and creates a short summary in bullet points, automatically finding action items, decisions, and open questions.
- Added a chat feature to ask questions about the meeting using RAG with a ChromaDB database, served with a Streamlit interface.

**Technologies / Tools Used:** Python, Whisper, Sarvam AI, LangChain, Mistral AI, ChromaDB, Streamlit

### CareerReach AI

[GitHub ↗](#)

- Developed CareerReach AI, an LLM-powered platform that extracts job postings from company career pages and generates personalized cold emails using RAG, LangChain, and Groq.
- Implemented vector search and semantic retrieval to match job requirements with portfolio projects, improving outreach relevance by 40% and reducing manual effort by 80%.

**Technologies / Tools Used:** Groq, LangChain, LLM Automation, Vector DB

### Vendor Invoice Intelligence System

[GitHub ↗](#)

- Developed an end-to-end ML-based invoice analytics system to predict freight costs and identify high-risk vendor invoices using historical financial data.
- Built and evaluated Regression and Classification models (Random Forest, Logistic Regression) improving analysis efficiency by 60%, with an interactive Streamlit dashboard reducing manual review by 70%.

**Technologies / Tools Used:** Python, Scikit-learn, SQL, Streamlit

## SKILLS

**Programming & Databases:** Python, SQL, PostgreSQL, MySQL, REST APIs

**Machine Learning & Cloud:** Pandas, NumPy, Scikit-learn, EDA, A/B Testing, AWS, AWS SageMaker, EC2, Docker

**Deep Learning & AI:** LLMs, RAG, LangChain, NLP, Graph Neural Networks (GNNs), Generative AI, TensorFlow, PyTorch

**Visualization & Analytics:** Power BI, Tableau, Matplotlib, Seaborn

## CERTIFICATIONS

### Certified Data Science Professional

Oracle University

Oct 2025 – Oct 2027

[View Certificate ↗](#)
